

Sustainable Harmonies

In the realm of industry's domain,
A vision of sustainability came to reign.

Eco-industrial parks, a noble quest,
Integrating objectives, a harmonious crest.

Environmental, economic, and social needs,
Brought together in fruitful seeds.
Promoting development, a sustainable stride,
Where nature and progress intertwine with pride.

Many nations embarked on this noble cause,
Yet limited success marked certain flaws.
But in China, Japan, and Korea's domain,
Significant achievements were there to gain.

This paper's purpose, a spotlight to cast,
On these three nations, a study amassed.
Characterizing their EIP projects with precision,
Drawing focus and strategies, a detailed rendition.

Two parts entwined, the study unfolds,
A bibliometric analysis and content that beholds.
ScienceDirect, Web of Science, and Dimensions at play,
Unveiling trends from '98 till this day.

Selection and approval, business approaches align,
Yet nuances exist in their focus and design.
Priorities, funding mechanisms may diverge,
But the vision of sustainable progress, they merge.

Eco-industrial parks, a symphony profound,
Where nature's harmony and progress resound.
China, Japan, and Korea, leaders in this quest,
Striving for a future where sustainability is blessed.
